Recent Projects

Project 1: AM Admin Panel [React, Node, Vite, TypeScript, Shadcn, Tailwind CSS]

AM Admin Panel is a robust and scalable web application designed for managing blogs, job postings, and various administrative tasks. Built using modern web technologies, the project ensures high performance, accessibility, and an intuitive user experience.

Responsibilities:

- Developed and maintained a responsive and accessible admin panel using React and Vite.
- Implemented TypeScript for better type safety and maintainability.
- Designed reusable and modular UI components using Shadcn, Radix-UI, and Tailwind CSS.
- Integrated TanStack React Table for efficient data management and filtering.
- Developed and optimized custom hooks for data fetching and state management.
- Implemented role-based access control (RBAC) to manage different user permissions (Admin, Blog Manager, Job Manager).
- Designed and integrated custom Tiptap editor with support for blog and campaign creation.
- Ensured SEO-friendly blog and job listings with structured metadata.
- Managed API interactions using Axios and created reusable service layers for API calls.
- Maintained the GitHub repository, including version control, feature branches, and issue tracking.
- Conducted code reviews, optimized performance, and ensured best practices for maintainability.

Project 2: Mass Marketing System [Angular, NodeJs, MongoDB, Express]

Verizon is an American wireless network operator that previously operated as a separate division of Verizon Communications under the name Verizon Wireless. Verizon's mobile network is the second-largest wireless carrier in the United States.

Responsibilities:

- Create exceptional responsive user interfaces
- Developed and maintained web applications using React and Node framework
- Implement responsive design and ensure optimal performance across various devices.
- Audit code to identify bottlenecks of performance and fixing them.
- Maintaining codebase on github for developed features & resolved bugs.
- Collaborated with back-end developers and UX-UI designers to deliver cohesive and visually appealing user interfaces.

Project 3: Vehicle eMarketPlace [Angular, NodeJs, MongoDB, Express]

It's an online marketplace or platform where individuals or businesses can list vehicles they want to sell, and potential buyers can browse, inquire about, and purchase these vehicles.

Responsibilities:

- Create exceptional responsive user interfaces
- Design and implement visually aesthetic user interfaces.
- Identify issues with front end code and rectify them to remove bugs.
- Create unit tests to ensure code is functioning as expected.
